GROUP 06 / MRI IMAGE QUALITY ASSESSMENT

Uploaded MRI Report

File: img 3 (1).nii.gz

Generated: 2026-10-28 03:43 UTC

Result	Uploaded image	After enhancement
Estimated quality	**Medium**	**Medium**
Estimated SSIM	**0.613**	**0.738**
Estimated PSNR	**20.70 dB**	**20.33 dB**

Model performance on held-out test images

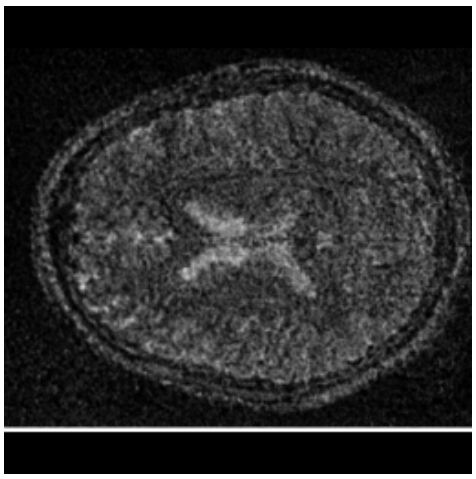

Model accuracy	Balanced accuracy	Model quality*
97.69%	**68.76%**	**Limited evaluation**

1728 input candidates from 6 held-out subjects; 2/3 reference-derived quality classes represented. This is model-wide test accuracy, not confidence in this uploaded image.

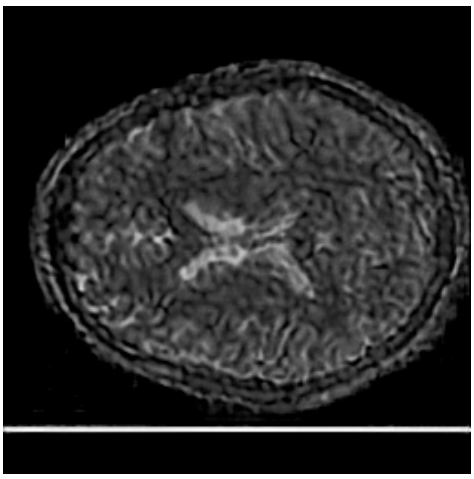

*Project model-quality bands use balanced accuracy: Good >= 90%, Medium >= 75%, Bad < 75%. A grade requires all 3 classes and at least 2 subjects; otherwise: Limited evaluation.

Visual comparison

Uploaded MRI

Enhanced MRI

Pipeline processing time: **22.0 ms** | Assessed at 256 x 256 pixels | Estimated SSIM change: **+0.126**.

Interpretation

The uploaded image is rated **Medium**; the enhanced image is rated **Medium**. These results use the model's estimated SSIM, with **Bad < 0.6**, **Medium 0.6 to < 0.8**, and **Good >= 0.8**.

No aligned reference scan was supplied. True PSNR/SSIM and model accuracy cannot be measured from this upload alone.

Scope: brain MRI quality assessment with synthetic-degradation training. Labels are editable project bands, not radiologist quality ratings or disease findings. Model-quality bands are project conventions, not clinical validation.
